"housing"

S4 1/2 - "like" structure designed to shield some parts, which
against actual physical interference or action, but
primarily shielded against observation.

S4 1/2 building + contents only part of larger
project - interlink w/ other elements.

AS BK

Big

~~Secret~~

S4 1/2 "Smoking" inside the building is meant to
"back out" and ^{proceeds} reflects to its "owners" specifications
at considerable distances. Almost as if it
doesn't stay in the structure but moves out
beyond it in some way.

one would expect to find them outside, not inside another

Site involves many, many diverse structures, most only marginally relevant to primary import of the site. One structure seems to have been detected of immense size & volume, the primary purpose which will culminate not long after the elapse of ^{year} one from present time. Structure seems to be intended somewhat as physical protection for its contents, but primarily as shield against observation. Something inside bldg. is intended to "reach out" beyond confines of the bldg & even the facility as a whole to perform tasks or purpose according to its "owners'" specifications. Great distances remained from site in question, ("Almost as if it doesn't stay in structure, but moves out beyond it somehow"). Structures' body may have a marked rounded component to it. Numerous dish-type antennas are associated w/ the site. Cylindrical dimension are involved with important objects at site. Within a (perhaps "the") structure is huge open vertical & horizontal space. Inside as well as/are structures of bipolarity dimension - are would expect to find a structure of this size outside, rather than w/in another structure. Inner structure is very complex in construction, w/ ~~many~~ many crisscrossing elements, cables, etc., & is made primarily of metal. Whole project seems to be built along space-program scales & portables of many smaller elements - including machinery, equipment, techniques, technology, &

S4 1/2 Seems that this "system" or "object" ~~is~~ ^{may be} intended to be used for a specific purpose, i.e. "put into operation," but for some reason it's not

Strong AR / AR/s of space vehicle of someone,
impression, perhaps incomplete, that "system" is
ultimately not used, though it is intended to be.
